To Whom It May Concern

Proposed letter of reference:

Supawood installed DIT Flush Stripe Fusion Maple panels in the St Mark's Primary School Library & School Hall, Drummoyne NSW.

The hall is used for many functions and is 26m x14m x 4.25m high. 180 m2 of the panels were installed on the hall ceiling and the walls.

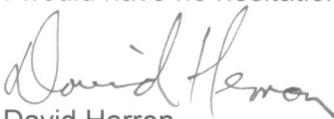

The effect of these panels has been to reduce the echo and noise in the room and also to greatly enhance the auditory acoustics of the room for musical performances.

The school's Music teacher is very pleased with the result. Supawood has excelled both in achieving the look and the acoustic performance required for their panels.

Supawood achieved on the project a high level of workmanship, planning and organization of the activities on site with their team. Particularly considering there was a tight construction programme, with project finishing on schedule.

Their commitment and focused nature has earned them the respect of the construction industry, our staff and the clients alike.

I would have no hesitation in recommending Supawood for future projects.
